# INTRODUCTION

Ecash Finance is a Yield Farming built on Vexanium Blockchain. Ecash Finance aims to improve the VEX DeFi ecological infrastructure and stimulate the profitability of the entire VEX ecosystem.

## DEFI GENERAL PROBLEMS

Maybe there are still many user who don't understand Decentralized Finance (DeFi). So, we give you an description of what is DeFi? DeFi is a movement that aims to create open-source financial services, permissionless, and transparent that are available to everyone and operate without a centralized authority. Users will be in full control of their assets and interact with the ecosystem through decentralized applications (dapps), peer-to-peer (P2P).

In addition, users will also ask, what are the benefits after following DeFi? Ecash Finance has a solution.

## ECASH SOLUTIONS

There are so many questions to ask why the Defi projects can't really sustain themselves that the price of their tokens is downtred. However, the real question is how many developers/projects are actually building to improve their decentralized financial products? The project and their developers are intended to ensure that the use of this application is easy for users and can be used in everyday life.

The main obstacle that led to Defi's inability to get mainstream attention was the fact that the project did not build an intuitive DeFi product that even by newbies to the blockchain could use. The Ecash team brings a solution to this by creating a variety of DeFi products that will increase the value of DeFi, VEX ecosystem and ECASH ecosystem, where this ECASH token can be used for everyday life, one of which can be used for PPOB payments (coming soon).
